Case Study ▶ Mission Management Services

Mission Management Fulfills Restaurant Investors' Needs with Compeat Advantage

Overview

Mission Management Services provides full management, consulting and accounting services to the restaurant industry. Mission Management also hires and leases to their customers, all of the employees to work at each of the restaurants they manage. Mission Management began 6 years ago with 3 restaurants and now provides services for 7 full service restaurants and 2 micro-breweries. In order to provide full management and accounting services for these 7 restaurants and the micro-brewery distribution center, Mission Management counts on Compeat.

Prior to Compeat

Prior to the formation of Mission Management, the team was utilizing a DOS based back office system and Real World accounting. They had no integration between these programs which resulted in additional labor hours needed to manually update information from each restaurant. They also did not have Payroll software that could manage the employees at each restaurant. When Mission Management was formed they began looking for a fully integrated, web-based system that would not only fulfill their back office and accounting needs but also provide them with a Payroll and Commissary software. Compeat was their answer!

“Compeat is truly unique software that brings your whole operation into one package.”

~ Barry Haven / President
Mission Management Services

Fulfilling Investors' and Owners' Needs with Compeat

Compeat now provides Mission Management with a complete back office, accounting, payroll, and commissary solution to utilize to service their customers. With Compeat's web-enabled architecture all information from inventory receipt at the restaurant to the profit and loss statement at the company office, is always available, always in balance, and resides in one common database. "Compeat is truly unique software that brings your whole operation into one package," raves Barry Haven, President of Mission Management Services.

Company Overview

Mission Management Services provides full management, consulting and accounting services to the restaurant industry. With Compeat they are able to provide their 7 full service restaurants and 2 micro-breweries with a complete back office, accounting, commissary, and payroll solution.

Business Situation

Needed integration between a DOS based back office system and Real World accounting. They also did not have Payroll software that could manage the employees at each restaurant.

Key Financial Results

Mission Management has a complete back office, accounting, payroll, and commissary solution in Compeat. With the web-enabled architecture all information from inventory receipt at the restaurant to the profit and loss statement at the company office, is always available, always in balance, and resides in one common database.

Mission Management employees and stakeholders agree that Compeat eXcellent Financial Functions are a favorite. These functions allow Mission Management to customize any reports the owners and investors are seeking and to provide these reports on a weekly basis. "Once you have all the templates built it decreases the time required to generate new reports. We don't have to reinvent the wheel every time an investor asks for a report. This has made us more efficient and given the owners and investors more insight into the restaurants' financials on a more frequent basis," says Haven.

As an added benefit, Mission Management has also been able to utilize the Accounting functions within Compeat Advantage to maintain the real estate financials for the various restaurants. Since the investment groups own the actual property the restaurants are on, but there are separate owners who own the restaurants, they often have different requests and needs. "Compeat is able to manage all financial aspects and provide the investors and owners with the financial data they seek," says Haven.

Payroll and Commissary – Compeat's Full Restaurant Management Solution

Mission Management hires all of their employees to work at each of the restaurants they manage and leases them out to the restaurant owners. With Compeat Payroll they are able to easily track and pay each one of these employees. From polling employee sales and tips, to handling multi-department employees, to printing payroll checks as well as direct deposit – payroll became quite simple with Compeat. Mission Management is also able file one consolidated government report for all of their restaurants as well as utilize e-filing for their tip incomes and allocated tips through Compeat Greenshades.

Mission Management does the accounting for **Northern United Brewing Company** and in addition manages their two restaurant operations – **Artisan Ales** and **Jolly Pumpkin**. These micro-breweries/restaurants count on Compeat Commissary to handle all shipments and sales of their beer worldwide. They also ship product within the company and can easily transmit inventory and prep requisitions to each store. Compeat Commissary also enables them to dig deeper and analyze usage trends and sales history by restaurant.

Going Forward

Mission Management Services is in the process of assuming management of an existing restaurant concept and is also opening a companion deli operation. They plan on utilizing Compeat for both of these operations. "There is no limit to what Compeat can do," according to Haven.
