

# Business Intelligence Software Creates Paper Trail for the Beer Hunter Sports Pub

Ctuit Software (now Compeat), the leader in business intelligence software for restaurants, announced that The Beer Hunter, purveyors of premier sports bars and grills, has deployed Compeat RADAR into its California locations. The web-based business intelligence solution is used by each restaurant for better visibility and control into front and back-of-house operations. Compeat's RADAR creates an electronic trail for improved management and insight into the restaurant's daily operations and substantially reduces the amount of manual intervention and paper used on a daily basis. Integrated with The Beer Hunter's Digital Dining POS system, the solution helps the restaurant eliminate the manual processes of forecasting sales, labor, food costs and analyzing other operational data. By providing detailed sales dashboards and automating the generation of reports, management can increase productivity and access important information online in a timely basis.

"Any restaurant owner or management who wants to make their life easier and spend more time on the floor with their customers should have RADAR," said Chris Engstrom, General Manager, Beer Hunter Menifee.

"The integrated inventory and recipe costing tools have allowed me to keep an up-to-date visual on our menu mix. As market prices change, I automatically see adjustments to my food costs without the need for tedious calculations," said Chef Ben McCormack, Beer Hunter Menifee.

*"Any restaurant owner or management who wants to make their life easier and spend more time on the floor with their customers should have RADAR."*

## COMPANY OVERVIEW

The Beer Hunter offers a full service bar to our varied menu and multiple game tables, so there's something for everyone at The Beer Hunter!

## BUSINESS SITUATION

The Beer Hunter needed an electronic trail for improved management and insight into the restaurant's daily operations.

## KEY RESULTS

RADAR integrated with The Beer Hunter's Digital Dining POS system, to help the restaurant eliminate the manual processes of forecasting sales, labor, food costs and analyzing other operational data.

Chef McCormack continues, "Ctuit software (now Compeat) was easy to set-up and allows management an inexpensive and easy access option to critical detailed operational data that previously took many man hours to produce. It provides independent restaurant operators with state of the art systems only national chains could afford. It brings discipline to daily operations leading to improved results."

"Ctuit (now Compeat) is designed to offer critical information essential to the needs of our clients," remarked Rob D'Ambrosia, former President and CEO, Ctuit Software. "With RADAR, The Beer Hunter can drill down on a sales number and access details to make effective decisions to the bottom-line."

Compeat RADAR is designed to meet the unique needs of the restaurant industry and, more importantly, to custom fit any restaurant business. The solution imports data across different restaurant concepts, locations, and across multiple POS systems within any organization to provide consistency in data and reporting on an enterprise basis.
