

Hennessey's Tavern, Inc. Launches with Above Store Intelligence

Web-based solution collects critical data for restaurant management

Ctuit Software (now Compeat), a leader in business intelligence software for restaurants, announced that Hennessey's Tavern, Inc., owners of dining and drinking establishments that emphasize good food and ambiance, implemented Compeat RADAR. The web-based solution collects detailed critical data from stores and provides management above store intelligence to better understand its business.

As Hennessey's Tavern, Inc. continued to expand, a more formal IT structure was needed to accommodate multiple sites. The management team set goals to unify the stores including combining databases, improving structural IT issues and deploying a formal email system. Once unification goals were achieved, Compeat was deployed to provide overall above store reporting and business insight.

Hennessey's Tavern, Inc. has had many successes with Compeat RADAR. Since employees connect directly to RADAR via the "cloud", security access cannot be compromised. The solution speeds up IT's operations by providing the means to generate and distribute store reports easily. Also, RADAR gives store managers the ability to run daily reports to analyze critical information and then take the appropriate initiative to improve operations.

"Ctuit (now Compeat) exceeded our expectations. Not only did we receive valuable store information online but also, we can access the information remotely and see it on our iPads."
